Sequence 7379, Application US/09866108

Patent No. US20020048800A1

Sequence 7379, Application US/09866108

Patent No. US20020048800A1

APPLICANT: U1, Yougang

APPLICANT: PENN', Sharron G.

APPLICANT: PENN', David K.

APPLICANT: RANK, David K.

APPLICANT: STANNON Mark

ITLE OF INVENTION: MYOSIN-LIKE GENE EXPRESSED IN HUMAN HEART AND MUSCLE

TILLE REPERENCE: AEONICA-7

CURRENT APPLICATION NUMBER: US/09/866,108

CURRENT FILING DATE: 2001-05-25

PRIOR APPLICATION NUMBER: US 60/207,456

PRIOR APPLICATION NUMBER: US 60/203.6

PRIOR APPLICATION NUMBER: US 60/236,359

PRIOR APPLICATION NUMBER: US 60/236,359
                                                  . MYOSIN-LIKE GENE EXPRESSED IN HUMAN HEART AND MUSCLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1.1%; Score 12.2; DB 1; Length 17; 82.4%; Pred. No. 8.66+02;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3; Indels
APPLICANT: SHANNON, MARK

TITLE OF INVENTION: MYOSIN-LIKE GENE EXPRESSE
FILE REFERENCE: AZOMICA-7
CURRENT APPLICATION NUMBER: US/09/866,108

Sequence 145, Application US/09864785

Patent No. US202017568A1

Patent No. US20202017568A1

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Ribozyme Pharmaceuticals, Inc.

APPLICANT: Stinchcomb, Dan

APPLICANT: Draper, Ken

APPLICANT: McSwiggen, Jim

APPLICANT: McSwiggen, Jim

APPLICANT: McSwiggen, Jim

TITLE OF INVENTION: Enzymatic Nucleic Acid Treatment of Diseases or Conditions Relater TITLE OF INVENTION: Levels of NF-Kappa B

FILE REPERENCE: 400/022 (MBHB00-812-D)

CURRENT APPLICANTON NUMBER: US/09/864,785

CURRENT PILING DATE: 2001-05-23

NUMBER OF SEQ ID NOS: 3929

SOGTWARE: Patentin version 3.0

SEQ ID NO 145

LENGTH: 17
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 222, Application US/09864785

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2545, Application US/09848754A

Publication No. U520030073207A1

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals, Inc.

TITLE OF INVENTION: Eavels of Epidermal Growth Factor Receptors

TITLE OF INVENTION: Levels of Epidermal Growth Factor Receptors

FILE REFRENCE: MBHB00-958-I (400/018)

CURRENT APPLICATION NUMBER: US/09/648,754A

CURRENT FILING DATE: 2001-05-03

NUMBER OF SEQ ID NOS: 9645

SOCITORARS: Patentin version 3.0

SEQ ID NO 2545
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

Sequence 284, Application US/09930423
Sequence 284, Application US/09930423
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ribozyme Pharmaceuticals, Inc.
APPLICANT: Blatt, Larry
APPLICANT: McSwiggen, Jim
TITLE OF INVENTION: Method and Reagant for the Treatment of Alzheimer's Disease
FILE REFERENCE: MBHB00, 918-A, 400/027
CURRENT APPLICATION NUMBER: US/09/930, 423
CURRENT FILING DATE: 2001-08-15
SOFTWARE: Patentin Version 3.0
SEQ ID NO SEQ ID NOS: 4553
SOFTWARE: Patentin Version 3.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 80, Application US/09930423

Publication No. US2003013891A1

GENERAL INFORMATION

APPLICANT: Ribozyme Plarmaceuticals, Inc.

APPLICANT: Lawrence Blatt

APPLICANT: Lawrence Blatt

APPLICANT: Lawrence Blatt

APPLICANT: Dames McSw4ggen

APPLICANT: Baratt Chowrina

ITLE OF INVENTION: Method and Reagent for the Inhibition of NOGO Receptor G

FILE REFERENCE: MBHS00-878-C (400/017)

CURRENT APPLICATION NUMBER: US/09/827,395A

CURRENT FILING DATE: 2001-04-05

FRIOR APPLICATION NUMBER: 09/780,533

FRIOR APPLICATION NUMBER: 09/181,797

FRIOR PILING DATE: 2000-02-01

FRIOR PELLING DATE: 2000-02-01

FRIOR PELLING DATE: 2000-02-01

NUMBER OF SEQ ID NOS: 2617

SOFTWARE: Patentin version 3.0

Application US/09792818

Publication No. US20030134806A1

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Fibozyme Planmaceuticals, Inc.

APPLICANT: Garvis, Thale

APPLICANT: McSwiggen, Jim

APPLICANT: Housely and Reagent for the Inhibition of Grb-2-related with Inser

TITLE OF INVENTION: Method and Reagent for the Inhibition of Grb-2-related with Inser

TITLE OF INVENTION: McHable 2001-3

TITLE REFERENCE: MRH800-901-A (400/013)

CURRENT APPLICATION NUMBER: US/09/792,818

CURRENT FILING DATE: 2001-02-23

NUMBER OF SEQ ID NOS: 2304

Publication No. US20030171311A1

GENERAL INFORMATION:

APPLICANT: Ribozyme Pharmaceuticals Inc.

TITLE OF INVENTION: Bizymatic Nucleic Acid Treatment of Diseases or Conditions Relat

TITLE OF INVENTION: Hepatitis C Virus Infection

CURRENT APPLICATION NUMBER: US/09/817,879

CURRENT FILING DATE: 2001-03-26

NUMBER OF SEQ ID NOS: 9703

SOFTWARE: Patentin version 3.0

SEQ ID NO 108

LENGTH: 17
